The Village of Salmon Arm, P.O. Box 99, Salmon Arm, B.C., hereby applies to the Secretary, Pollution-control Board, for a permit to discharge treated domestic sewage into Shuswap Lake, which flows north and discharges into South Thompson River, and gives notice of its application to all persons affected.

The point of discharge shall be located 150 feet east of the west boundary of the Village of Salmon Arm where this intersects the water-level of Shuswap Lake.

The land upon which the effluent originates is the Village of Salmon Arm.

The quantity of effluent to be discharged is as follows: Maximum hourly rate, 2.0 cubic feet per second, 750 imperial gallons per minute; maximum 12-hour discharge, 375,000 imperial gallons; average 24-hour discharge, 340,000 imperial gallons.

The operating season during which the effluent will be discharged is continuous.

The characteristics of the effluent to be discharged are as follows: Suspended solids (p.p.m.), 200 average before treatment, 30 average and 40 maximum after treatment; total solids (p.p.m.), 800 average before treatment, 80 average and 160

maximum after treatment; biochemical oxygen demand (p.p.m.), 210 average before treatment, 40 average and 50 maximum after treatment; pH, 7.2 average before treatment, 7.2 average after treatment; temperature (degrees Fahrenheit), 45 average before treatment, 45 average and 75 maximum after treatment; coliform bacteria (average m.p.n. per 100 ml.), 50,000,000 average before treatment, 10,000 average after treatment; toxic chemicals (p.p.m.), none.

NOTE.—There are two plants which produce undesirable effluents which may eventually be connected to the village sewerage system. These are:—

- (1) A creamery: This plant produces butter and cheese and at present discharges some buttermilk into the system, although most of it is sold and removed from the premises. The main waste is cooling water.
- (2) The abattoir: This plant is not connected to the system at present. Animal refuse is presently collected and removed for processing in bulk. Blood is washed into the plant drains and is processed in three septic tanks prior to discharge into a ditch leading directly to Shuswap Lake.

It is the intention of the village to pass a by-law requiring all plants to treat their own effluent to a stage equivalent to average domestic sewage prior to discharge into the village system.

The type of treatment to be applied to the effluent before discharge is oxidation in two-cell open lagoon.

A copy of this application was posted at the proposed point of discharge on the 14th day of December, 1964.

This application is to be filed with the Secretary, Pollution-control Board, Parliament Buildings, Victoria, B.C. Objections may be filed with the Secretary within 30 days of the first publication of the application.
